ExamiQ - Official Scorecard

Automated Verification & Evaluation Report

Student Name:	Skandhan M U
Email Address:	skandhan@student.edu
Exam Title:	Java SE 21 Core Certification
Subject:	Computer Science
Attempt ID:	#EXAM-1
Submission Status:	SUBMITTED

Score Obtained	Percentage	Result Status	Anti-Cheat Violations
25.0 / 25.0	**100.00%**	**PASSED**	**1**

Detailed Question Breakdown

Q1. Which JVM memory region is shared among all Java threads for storing objects? (5.0/5.0 Marks)

[ ] JVM Stack
[X] Heap Memory (Correct Answer)
[ ] Program Counter (PC) Register
[ ] Native Method Stack

Explanation: The Heap area is the runtime data space from which memory for all class instances and arrays is allocated. It is shared across all threads.

Q2. What is the output of compiling and executing a Java file with 'public final class' attempting to inherit another class? (5.0/5.0 Marks)

[ ] Compilation Error: Final classes cannot extend any parent
[X] Compiles cleanly if the parent class is not final (Correct Answer)
[ ] Runtime Exception: SecurityViolationException
[ ] Compiles only if parent class is abstract

Explanation: A final class can inherit (extend) non-final parent classes, but no child class can extend a final class.

Q3. Which interfaces belong to the Java Collections Framework? (Select all that apply) (5.0/5.0 Marks)

[X] java.util.List (Correct Answer)
[X] java.util.Set (Correct Answer)
[X] java.util.Map (Correct Answer)
[ ] java.lang.Thread

Explanation: List, Set, and Map are core collection interfaces. Map does not inherit from Collection interface directly, but is part of the Java Collections Framework.

Q4. In Java, string literals defined with double quotes are stored in the String Constant Pool. (5.0/5.0 Marks)

[X] True (Correct Answer)
[ ] False

Explanation: True. Java maintains a specialized String Pool inside the Heap to reuse identical string literals and conserve memory.

Q5. What happens when a checked exception is thrown in a Java method without a try-catch block or a throws clause? (5.0/5.0 Marks)

[ ] Method executes normally and ignores exception
[X] Compilation Error (Correct Answer)
[ ] Runtime Exception
[ ] JVM terminates quietly

Explanation: Checked exceptions must be caught or declared in the method signature; failing to do so causes a compilation error.
